

LITEWAVE SURF-SHAPE

The solid poly construction has made the Surf shape an all out surf machine which feels best in overhead surf!

The Surf-Shape is 5'8" and has a bat tail. The quad fins and 'mack daddy' foot straps and pads will ensure that you only get the best!

Over a year of R&D in Mauritius, California, and Florida led Litewave to develop this hot new Surf-Shape. It is designed for the waves. A pulled in bat-tail outline and a faster-gun style rocker allows this board to really drive through and keep speed in the bottom turns, while the quad-fin configuration gives incredible grip for snappy off-the-lips. The quad fin also makes for a wave board with limitless top end speed yet very snappy and responsive feel unlike other thruster configurations which are slower.

The Surf-Shape 5'8" has been constructed to really withstand the abuse that a kite rider will give it. Machined EPS core is wrapped with wood-veneer/glass/epoxy composite laminate to provide impact resistance and the optimum strength-to-weight ratio.
